Design and develop the website using Figma to create web page layouts and develop the frontend website with HTML CSS JAVASCRIPT language, with the backend side developed by node.js and the database management of the website using Mysql to design the database's Schema appropriately. with data structure

Hello World Goose 2023

This is a project of an information technology team. I want to lead children to learn how to build, design and develop websites and games. I am in charge of the front-end development team and teach children about HTML, CSS and Tailwind in website development. In this activity, I also teach them the basic knowledge about typescript and react, so that children can build a practical website.

Final Project - UX UI

It's a UX UI design project where the team will brainstorm ideas about what problems they want to solve. Using new technology or innovation to solve problems. We have worked on laundry and ironing shops. of the women's dormitory in the university By creating an application to solve problems on both the user side and the service provider side.
